PROJECT NAME
Petapilot

COUNTRY
Portugal

WEBSITE: http://petapilot.com/

PetaPilot is an innovative company created around the vision of its founders on building technology for business, with high potential for internationalisation.

The project started in Oporto (Portugal) and they operate on the business, government and institutional market (namely Luxembourg, France, Austria and other OECD countries). The company recently opened a delegation in Lithuania, following the business opportunities arising in Central Europe and the Baltics.

The company develops products and technology platforms for data analysis with high variety and volume, mainly Business Intelligence solutions, Big Data, Cloud Computing and fraud detection.

The company has a strong component of research and development in products and services through an experienced team of resources with multiple skills, namely IT engineers and experts in finance.

Their activity is developed around that same set of highly specialised resources, either by connecting the research groups of higher education institutions, or by participation in R&D projects together with its business partners.

The main product of PetaPilot is Colbi. Colbi (Collaborative Business Intelligence) is an analytical tool of commercial and financial information, with high scalability and performance. The company has Cloud / Software as a Service (SaaS) version and an appliance, installed on customer data centers.

The Colbi serves a number of sectors ranging from government financial regulation, consultancy companies, industry, distribution and services. Companies in Portugal and abroad, including BDO, Delta, Barbosa and Almeida (BA Vidro), Saint-Gobain, SUCH, the Tax Authority and Customs, among others, are using our solution for Data Analysis, Decision Support, Audit Inference and fraud detection.

For the benefit of their customers, they have created a support center with multidisciplinary and integrated skills (software engineers, financial experts, accounting).

In addition to their products and technology services (on business intelligence and BigData technologies) they have a consulting team specializing in Governance, Risk and Compliance (GRC), to support their customers on implementing and designing solutions related to compliance best practices, audit, internal and external control mechanisms.
